Bioinformatics Programmer

Job Description

The Bioinformatics/Computational Biology faculty are searching for an experienced scientific programmer for Bioinformatics algorithm development and implementation, graphical user interface and web server design and data management. This motivated individual will work closely with both faculty and graduate students to provide training and make decisions regarding appropriate software implementation for scientific algorithms. These decisions will commonly involves issues such as how to improve efficiency, increase projects to encompass more data and how to visualize data.

Requirement

Applicants should have a Masters degree in Computer Science, Engineering or related area and 7 years of relevant programming experience in addition to experience in Bioinformatics. Expertise in software system design, C/C++/JAVA development, CGI scripting, and data management is required.

Ideal candidate will be someone excited about contributing to cutting-edge research projects in Computational Biology. Applicants should value collaboration and teamwork while also being able to work individually and prioritize multiple projects. A high degree of professionalism, customer focus, and organizational skills is required.

Closing Statement

This position is guaranteed for two years from date of hire with the possibility of further continuation.
